PROFILE

Junior developer with six end-to-end projects delivered in Java/Spring Boot, C#/.NET and React, plus a product of my own taken from idea to launch. I am most comfortable on the backend, work confidently on the frontend, and care particularly about quality: edge cases, endpoint validation and error handling. Currently studying Systems Analyst at ORT University, thesis in progress. Looking for my first junior role in development, QA or IT support.

FEATURED PROJECT

RouteEV — Trip planner for electric vehicles in Uruguay • 2026, *actively developed*

Python • FastAPI • React Native (Expo) • TypeScript • JavaScript • Leaflet / MapLibre • JWT • REST

- Custom routing engine over the country's real road graph (63,800+ OpenStreetMap intersections): checks battery segment by segment and inserts charging stops when range falls short.
- Catalogue of 880 electric vehicle models and Uruguay's 209 UTE charging stations, with an open trip simulator that requires no account.
- Full end-to-end product: REST API with JWT authentication, web frontend and a React Native mobile app with background trip tracking.
- Validated with real users: a survey of EV drivers whose results reshaped the roadmap priorities.
- Mobile app being prepared for release on the app stores.

TECHNICAL SKILLS

Languages: Java, C#, Python, JavaScript, TypeScript, SQL, HTML5, CSS3

Frameworks: Spring Boot, .NET / ASP.NET MVC, FastAPI, React, React Native (Expo), Entity Framework, Bootstrap

Databases: MySQL, SQL Server, MongoDB — normalisation and schema design

QA & testing: Postman, Swagger / OpenAPI, endpoint validation, edge-case analysis, debugging

Tools: Git, GitHub, Maven, IntelliJ IDEA, VS Code, MVC architecture, REST APIs, Agile / Scrum

Cloud: AWS Academy, Microsoft Azure (fundamentals)

OTHER PROJECTS

Objective Tracker Dashboard | Java • Spring Boot • React • MySQL • 2025 — Multi-tier REST API with five CRUD endpoints and an interactive React dashboard. Three-person Scrum team with dailies and code review.

Sports & Athletes Management System | C# • ASP.NET MVC • SQL Server • Swagger • 2025 — Normalised four-entity SQL schema, role-based access control and a documented API. Resolved eight edge-case bugs to get the suite green.

Toll Management REST API | Java • Spring Boot • 2025 — Clean layered architecture with correct HTTP semantics and complete Swagger documentation.

Food Inventory & User Management | JavaScript • HTML5 • CSS3 • 2024 — Complete authentication flow without frameworks, real-time geolocation and responsive design.

Library Book Rental System | Java • Data structures • 2024 — Rental logic built on advanced ADTs with custom sorting and search algorithms.

EGA Transport — Corporate website | HTML5 • CSS3 • 2024 — Mobile-first responsive site, cross-browser compatible.

EDUCATION

Systems Analyst (Analista Programador) | ORT University Uruguay • March 2026 – present
In progress, thesis under development. Continuing towards a B.Sc. in Systems Engineering.

Certified Web Programmer | ORT University Uruguay • January 2023 – May 2026
Backend development, software architecture, databases and REST APIs.

CERTIFICATIONS

- GeneXus 18 Junior Analyst — March 2026
- Cambridge English B2 — First Certificate

STRENGTHS

Persistence: I train Hyrox three times a week. When something does not work the first time, I keep at it until it does — the same mindset I bring to a bug.

Technical versatility: I move between Java, C#, Python and JavaScript without friction, and pick up new stacks quickly.

Quality focus: I care about edge cases and about error messages that actually help the person reading them, not just the happy path.

Languages: Spanish (native). English B2 certified by Cambridge.
